NUMERIKON

XPace 3.2

Installation

Installation of Java

Installation of XPace 3 requires installation of Java Runtime Version 1.6.x or higher. The newest Java version is available for free on **java.sun.com**.

Install XPace

Now you can install XPace.

From CD:	simply copy the entire **XPaceProfessional** folder from CD to your local hard disk.
From ZIP archive:	unpack the ZIP file, then simply copy the entire **XPaceProfessional** folder to your local hard disk.

That's all - start XPace using **XPaceProfessional.exe** (on Windows) or **XPaceProfessional.app** (on Mac) in the main install folder. You might create a link to the executable on your computer's desktop.

Operation systems and packages:

win32.win32.x86	32 Bit Windows version (requires 32 Bit Java runtime)
win32.win32.x86_64	64 Bit Windows version (requires 64 Bit Java runtime)
macosx.cocoa.x86_64	64 Bit Mac version (requires 64 Bit Java runtime)

Please be sure the user has write access to the install folder - during installation *and* on normal execution.

License

On first start the program asks for the license. In case of local license enter your license number. If you use a License Server enter the URL to your license server.

Database

Now configure the database. On **Shared base directory** select a folder where all data are to be stored (we recommend **C:\XPaceData** or a shared folder in your network) and and let the program copy the base data.

Please be sure the user has write access to the database folder and all sub-folders.

XPace running on Windows Vista or Windows 7

On Windows Vista or Windows 7 deactivate the Aero desktop theme: **Properties of XPace Professional.exe**, **Compatibility**, **Disable desktop composition**.

Help and First Steps

Please read the **First Steps** help section and use the **Step-by-Step Tutorials** to learn about concepts and functionalities. In case of any questions feel free to contact our hotline.

De-installation

To de-install XPace simply delete the **XPaceProfessional** folder and the database folder. XPace does not copy any files to other locations than these two and makes no entries to the registry.
